Subject Index

- Actinomyces naeslundii*, 293
Adhesive contact rupture, 51
Adhesive-sphere model, 249
Adsorption of surfactants, 263
Aerocolloidal droplets, 137
Aerosol, 169
Aerosol chemistry, 137
Apatite minerals, 293
Atomic force microscopy, 199
- Bubbles, 89
- Cold nuclear fusion, 51
Colloid stability, 249
Common black films, 129
Competitive adsorption, 263
Concentrated dispersions, 105
Contact angles, 25
Copper–gadolinium basic carbonates, 191
Critical composition, 151
Critical particle size, 275
Critical supersaturation, 43
- Depletion interactions, 249
Dielectric matching, 275
Dielectric spectroscopy, 81
Dispersibility, 275
Dissolution, 157
Drainage, 71
- Electrical phenomena, 51
Electrodynamic levitation, 137
Electrophoresis, 217
Electrostatic forces, 33
Electrostatic interactions, 217
Electroviscous forces, 33
Emulsion precipitation, 199
- Failure of solids, 51
Ferric hydroxide, 233
Fe(III) (hydr)oxides, 157
Flotation, 97
Foam films, 129
Free liquid films, 71
- Gas discharge, 51
Gas permeation, 129
Gas/aerosol reactions, 137
- Hafnia, 169
Hafnium *tert*-butoxide, 169
Hematite, 233
Hexaoxyethylene hexadecyl ether, 151
Hexaoxyethylene tetradecyl ether, 151
Historical development, 1
Hydrolysis, 169
Hydrophobic attraction, 25
- Ice, 11
Indium hydroxide, 227
Indium oxide, 227
Interfaces, 115
Interfacial interactions, 89
Interlayers, 11
Interparticle interactions, 105
Iron oxides, 177
Isoelectric points, 217
- Kinetics, 177
- N*³-Lauroyl-L-arginine methyl ester, 81
Lead–zirconate–titanate (PZT) complex oxides, 217
Ligands, 157
Line tension, 43
Lipoamino acid, 81
Liquid crystals, 263
Liquid–liquid solubility curve, 151
- Macroscopic geometry, 43
Marginal regeneration, 71
Microdroplet Raman spectroscopy, 137
Minerals, 89
Mineral surfaces, 97
Monodispersed particles, 227
Monodisperse particles, 233
Monolayer permeability, 129
Monolayers, 115
- Nanocrystalline materials, 199
Neglected thicknesses, 1
Newton black films, 129
Non-aqueous stability, 275

- Non-freezing water, 11
- Non-ionic surfactant, 151
- Nucleation, 43
- Oral bacteria, 293
- Oxidation, 177
- Oxide particles, 199
- Particle preparation, 227
- Particles, 177
- 1-Pentanol, 81
- PEO/PMMA graft copolymers, 115
- Precipitation, 191, 233
- Precursors of mixed oxides, 191
- Rheological behaviour, 115
- Rheology, 105
- Scattering, 249
- Shape control, 233
- Silica, 263
- Silica surface, 11
- Silicon suspensions, 275
- Spherical colloidal particles, 33
- Spreading films, 65
- Streptococcus sanguis*, 293
- Submicrometre particles, 199
- Supersaturated water vapour, 43
- Surface forces, 89
- Surface tension gradients, 65
- Surfactants, 263
- Suspensions of ceramic oxides, 217
- Synthesis, 191
- Theory of coagulation, 1
- Thermodynamic properties, 97
- Uniform particles, 227
- van der Waals forces, 33
- Water, 81
- Water film, 97
- Wetting films, 25
- Zeta potential, 293
